

STABILISING DEVICE.

**MAKING AEROPLANES FOOL
PROOF.**

AUSTRALIAN INVENTION.

MELBOURNE, Thursday.

Mr. J. E. Bailey, a resident of Kew, has applied for a patent for a stabilising device for aeroplanes. He claims that his invention will make machines fool proof. He experimented for some time with gliders and then fitted an engine, the subsequent flights being successful. He says he will make ascents with Guillaux to demonstrate the efficiency of the device.
