

**FLYING THE PIPER
JUST COULDN'T**

Cherokee
BE EASIER...

LOW WINGS GIVE

EXCEPTIONAL STABILITY!

Test pilots everywhere are enthusing about the Piper CHEROKEE, which has features found previously only in aeroplanes much more expensive than this sleek, all-metal four-seater.

They say stalling the Cherokee can only be achieved by the most deliberate mishandling plus real muscular force.

For further details contact—

They say its low wings mean a low centre of gravity and amazing 'ground-cushion' approaches, as well as wide-tread tricycle landing gear and maximum visibility.

They praise its quick take-off and excellent climb, and the way it hums along at 130 m.p.h. on economical power.

Cherokee has a big, big cabin, too, and a 19 cubic-ft. luggage compartment.
