

It's easy to weigh aircraft . . .

(If you have the equipment)

but how do you weigh aircraft service?

Measure it this way. You must have:

1. FACILITIES For instance, there's the combined area of 404,500 sq. feet of work space in De Havilland's BANKSTOWN and LIDCOMBE Service Centres, equipped with everything needed to give *complete* aviation service.

2. EXPERIENCE De Havilland Aircraft has been a leader in the Australian aviation industry for 35 years — *that's* experience.

3. SKILLED PERSONNEL People involved in advanced design work on piston and jet aircraft — aeronautical engineers — radio, instrument and electrical technicians — aircraft maintenance, repair and overhaul experts — in short, the skilled personnel you find at De Havilland Aircraft.

4. SPARES The most extensive inventory of British and American airframe, engine, propeller and accessory spares always available *when* you need them from De Havilland Aircraft.

Add one more item. The practical, commonsense approach of men who *know* aviation — and the answer to comprehensive aviation Servicing (*incidentally, they have the equipment to weigh aircraft, too*) adds up to:—

DE HAVILLAND AIRCRAFT PTY. LTD.

(Member Company of the Hawker Siddeley Group)

Box 30, P.O., Bankstown — Milperra Road. Telephone: 77-0111.
