

NIMBUS

DEPENDABLE POWER UNDER ALL CONDITIONS

The rugged and reliable Bristol Siddeley Nimbus has been developed for long life under rough operational conditions. The Nimbus characteristics of a simple basic design, low overhaul costs and exceptional ease of maintenance make it the ideal power unit for general-purpose helicopters.

Nimbus engines are in full-scale production for the Westland 'Scout' and 'Wasp' helicopters—ordered in quantity for the Army, Royal Navy, and other forces including the Royal Australian Navy.
